

Electrical Certificate Training Program/Sign and Service Installation Technician

The Atlantic Chapter developed the Electrical Certificate Training Program (ECTP) in conjunction with the Alberta Sign Association with the goal of providing safety education and technical training for the electrical certification of a Sign Service/Installation Technician.

An individual can obtain accreditation from the Province of New Brunswick when they have successfully completed the approved technical training.

The program training allows a worker to work on the electrical components of a sign that would normally be serviced by an electrician. Note though that there are limitations.

The Atlantic Chapter hosts the ECTP online and once that portion of the course is complete there is a full day course. The course consists of hands on labs and a final examination.
